Experience

Software Engineer

Vervebot io

[01.11.2024-Present

- Built a full-stack ICMS app to automate invoicing and inventory workflows.
- Integrated barcode scanning for product detection (–60% manual data entry).
- Reduced invoice processing time by >50% via streamlined logic and API design.
- Delivered analytics and reporting modules for data-driven insights.

Projects

1. Inventory and Chain Management System (ICMS)

- Designed and implemented a comprehensive invoice and chain management system to streamline business operations.
- Built core modules for barcode scanning, invoice processing, product cataloging, and analytics dashboards, ensuring real-time synchronization across multiple devices.
- Integrated automated data validation and API-driven product lookup, significantly reducing manual data entry by 60% and cutting invoice completion time by over 50%

2. DNS Server

- Built a custom DNS server using Node.js, understanding DNS protocols, record types (A, MX, CNAME), and caching mechanisms.
- Utilized tools like WSL Ubuntu, nmap, and ncat for testing and debugging.
- GitHub Repository: DNS Server

3. MERN Stack Chat Application - "Chat Realm"

- Developed a real-time chat application using the MERN stack (MongoDB, Express.js, React, Node.js).
- Implemented real-time messaging functionality for seamless communication.
- Designed intuitive UI components for a modern user experience.

Skills

- Backend: Node.js, Express.js
- Frontend: React.js
- Databases: MongoDB, RDBMS,
- Languages: Python, JavaScript, Typescript
- DNS Protocols
- Linux Commands
